

The Lockwood Story

Lockwood International Limited is the export representative company of Lockwood Group Limited, founded in 1952 and now the parent company of a group of dynamic businesses based on the single, simple idea of utilising New Zealand Radiata pine in an innovative and distinctive engineered building system.

First developed and patented in 1951 by Dutch-born engineer, Joe La Grouw Snr, the Lockwood Building System is an engineering innovation that has gone on to enjoy worldwide recognition and success.

With the benefit of almost 60 years of experience and continuous development, Lockwood has evolved from strength to strength with design and technological innovation, enhanced flexibility and cost-efficiency continuing to expand the system's appeal and range of applications.

Independent tests and real life applications have proven time and again the Lockwood System's superior structural integrity and exceptional resistance to both earthquakes and cyclones, while the company's client list and customer satisfaction levels speak for themselves.

The Lockwood organisation is now vertically integrated from sawmills through design to construction, with group companies employing over 250 people in New Zealand and overseas.

The Lockwood group of companies operate from a 10ha facility in Rotorua, New Zealand, comprising 16 factories producing all system components along with a range of additional proprietary building products including laminated posts, beams, panels and other customized components.

Lockwood Group Limited is a remarkable and enduring New Zealand industrial success story, with the organization still controlled and managed today by the original founding family.

Proven Export Performance

Lockwood has over 50 years' experience in servicing export markets in 30 countries. Lockwood's executives and specialist export staff are fully aware of the responsibilities and priorities associated with servicing overseas markets and are fully conversant with all protocols and procedures involved in the processing, preparation, documentation, shipping and delivery of Lockwood System components to destinations around the globe.

Lockwood International also manufactures and exports a wide range of engineered solid timber building components, commodities and specialised systems into Australia, throughout the Pacific Rim, and to the USA.
